

ELIMINATOR®

BRIDGE DECK WATERPROOFING

For over 50 years, the **ELIMINATOR®** bridge deck waterproofing system has provided unparalleled protection around the world.

This pioneering system is a cold, spray-applied solution that performs in even the harshest conditions — reducing maintenance costs and traffic disruptions.

Why use ELIMINATOR®?

PROVEN TRACK RECORD FOR 50 YEARS

The ELIMINATOR® bridge deck waterproofing membrane has an unparalleled track record protecting thousands of concrete and steel bridges throughout the world.

FAST APPLICATION

One key benefit of the ELIMINATOR system is the fast application (in excess of 2000m² per day). It is cold, spray-applied for fast and effective application with no need for hot trades. Elimination of critical overcoating time allows phasing of work for greater scheduling flexibility.

LONG LASTING PROTECTION

ELIMINATOR protects the bridge deck from water, de-icing salts and airborne chlorides. It helps to maintain the decks structural integrity, significantly reducing the need for repairs, and minimising long term maintenance costs and related carbon emissions.

PERFORMS IN HIGH TEMPERATURE ENVIRONMENTS

Unlike alternative solutions that are sensitive to moisture, the ELIMINATOR membrane can be applied virtually year round, in any climate, preventing costly weather delays. It cures in just an hour, even in high humidity or low temperatures.

BRIDGE DECK WATERPROOFING

Benefits of ELIMINATOR®

Reduced
Maintenance

REDUCED MAINTENANCE AND REPAIR

The long-term integrity of the ELIMINATOR waterproofing system provides better protection from water and salts, whilst the strong bonds that can be achieved play a pivotal role in maximising the service life of the asphalt pavement. Together these help reduce the required maintenance and repair.

LOWER WHOLE LIFE COST

By reducing maintenance requirements, both in terms of repairs to the bridge deck itself but also repairs and replacement of the asphalt pavement, the ELIMINATOR® system can reduce the associated costs. Reduced maintenance also means less disruption to road-users and helps to decrease asphalt related carbon emissions.

Long Lasting
Protection

Project
Delivery

PROJECT DELIVERY

The ELIMINATOR system offers simple, fast, flexible, robust installation. It has a wide temperature and humidity window for application and has no critical overcoating time. This gives greater programme flexibility and helps projects to be delivered on time.
